Skin / Volume Boosters

[Post-procedure progress]

- After the procedure, swelling, raised bumps, redness, bruising, and injection marks may occur. These vary by individual but usually improve within a few hours to 7 days.

- After skin booster treatments, results gradually appear over 2~4 weeks. We recommend 3 sessions at intervals of 3~4 weeks.

- For collagen volume boosters (Juvelook Volume, Radiesse), the injected solution is absorbed first, so the initial volume may decrease. The remaining powder particles gradually stimulate collagen regeneration over 1~2 months. We recommend 3 sessions at intervals of 4~6 weeks.

Skin / Volume Boosters

[Aftercare]

- Avoid touching or rubbing the treated area.

- The skin may feel dry after treatment, so please apply regeneration cream generously.

- Avoid massage, hot baths, saunas, intense exercise, alcohol, and smoking for 1 week.

- If you experience severe itching or redness, apply the provided steroid ointment thinly twice a day (morning and evening) for 3 days.

- If you were prescribed medication, please take it as directed.

- For Juvelook Volume, perform massage 5 times a day for 5 minutes each, for 5 days.
