Botox | Skin Botox | Contouring / Fat-Dissolving Injections

[Post-procedure progress]

- Swelling, redness, bruising, and injection marks may occur after treatment. These usually improve within a few hours to 7 days.

- Botox and Skin Botox effects appear within 2 weeks and last approximately 3~6 months.

- Contouring / fat-dissolving injections begin to show facial line refinement after 2~3 weeks.

- Swelling caused by the medication may last for 2~3 days.

[Aftercare]

- Avoid touching or rubbing the treated area.

- After Botox treatment, a temporary feeling of heaviness or discomfort may occur at the treated area. In such cases, applying a warm compress may help alleviate the symptoms. This is particularly recommended if a feeling of heaviness around the eyes occurs after forehead Botox treatment.

- Avoid massage, hot baths, saunas, intense exercise, alcohol, and smoking for 1 week.

- For contouring injections, cold compresses after treatment can help reduce swelling. Light massage is recommended to help the fat-dissolving solution spread evenly.

- After jaw Botox, avoid hard, chewy foods and excessive chewing.
