Potenza | Fraxel | Pigmentation

[Post-procedure progress]

- Redness, burning sensation, needle marks, flaking, and scabbing may occur after treatment. These usually improve within 3~5 days depending on the individual.

- Temporary breakouts or folliculitis may occur. Do not squeeze the area; allow it to calm naturally. If symptoms are severe, visiting the clinic for extraction may help.

- Skin regeneration effects gradually appear over 2~4 weeks. We recommend 3 sessions at 1-month intervals.

Potenza | Fraxel | Pigmentation

[Aftercare]

- Avoid touching or rubbing the treated area.

- Apply regeneration cream generously if dryness occurs.

- Always apply sunscreen after treatment to prevent pigmentation.

- Avoid massage, hot baths, saunas, intense exercise, alcohol, and smoking for 1 week.

- Avoid exfoliation, scrubs, and peeling. Wash your face gently.

- If severe itching or redness occurs, apply the provided steroid ointment thinly twice a day (morning and evening) for 3 days.

- Avoid functional skincare products containing vitamin A, vitamin C, retinol, or alcohol.
