Fillers | Thread Lifting

[Post-procedure progress]

- Swelling, bruising, foreign body sensation, injection marks, tightness, and throbbing pain may occur after treatment. These usually improve within 3~7 days.

- Temporary unevenness, asymmetry, excessive volume, or tightness may be felt. These typically settle and look more natural within 1~2 weeks.

- After thread lifting, pain may occur in the inserted areas when moving facial muscles.

- After the procedure, if you experience changes in skin color, blisters (which may appear similar to acne), severe pain, bruising that persists for an extended period, or if threads become exposed, please contact the clinic immediately.

Fillers | Thread Lifting

[Aftercare]

- Avoid pressing or rubbing the treated area strongly.

- Avoid massage, hot baths, saunas, intense exercise, alcohol, and smoking for 1 week.

- Take all prescribed medications to prevent pain and inflammation.

- Avoid sleeping face-down, postures that may deform the area, and wearing hats or sunglasses.

- After thread lifting, avoid opening your mouth widely, and cleanse your face gently.
